A minimum surrender value is guaranteed when the contract is terminated due to full surrender, death, or annuitization. This amount is calculated by:

- Taking 87.5% of aggregate purchase payments accumulated at the contract's non-forfeiture rate, which cannot be less than 1% or more than 3%, and
- Subtracting any prior aggregate withdrawals accumulated at the non-forfeiture rate.

¹ Amounts allocated to any of the following strategies earn interest in arrears based, in part, on the performance of the S&P 500® Index (without dividends). Interest, if any, is credited at the end of each crediting period.

² This strategy credits interest when index performance is positive — up to a maximum of the interest rate cap in effect for that year. When index performance is flat or negative, no interest is credited for that year.

³ This strategy credits a predetermined trigger interest rate when index performance is flat or positive. When index performance is negative, no interest is credited for that year.

⁴ Amounts allocated to this strategy earn interest in arrears, based in part on the performance of the Citi Flexible Allocation 6 Excess Return Index. The crediting period is two years. This strategy credits interest by multiplying the index performance by the participation rate. A positive result is the interest rate for that term. If the result of that calculation is 0% or negative, no indexed interest will be credited for that term. This strategy has a participation rate declared in advance, subject to the minimum participation rate, and is guaranteed for each two-year crediting period. The crediting strategy will not reduce the contract value, even if the index performance is flat or negative.
